Fast detection of communication patterns in distributed executions

Thomas Kunz, Michiel F. H. Seuren

November 1997 Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research

Full text available: pdf(4.21 MB)

Additional Information: full citation, abstract, references, index terms

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

Personal distributed computing: the Alto and Ethernet software Butler Lampson

January 1986 Proceedings of the ACM Conference on The history of personal workstations

Full text available: pdf(3.00 MB)

Additional Information: full citation, abstract, references, citings, index terms

The personal distributed computing system based on the Alto and the Ethernet was a major effort to make computers help people to think and communicate. The paper describes the complex and diverse collection of software that was built to pursue this goal, ranging from operating systems, programming environments, and communications software to printing and file servers, user interfaces, and applications such as editors, illustrators, and mail systems.

3 The fuzzball

D. L. Mills

August 1988 ACM SIGCOMM Computer Communication Review , Symposium proceedings on Communications architectures and protocols, Volume 18 Issue

Full text available: pdf(1.09 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

The Fuzzball is an operating system and applications library designed for the PDP11 family of computers. It was intended as a development platform and research pipewrench for the DARPA/NSF Internet, but has occasionally escaped to earn revenue in commercial service.

It was designed, implemented and evolved over a seventeen-year era spanning the development of the ARPANET and TCP/IP protocol suites and can today be found at Internet outposts from Hawaii to Italy standing watch for adventurou ...

4 Linux Apprentice: A Heterogeneous Linux/Windows 95 Home Network

Chirakkal Easwaran August 2000 Linux Journal

Full text available: html(19.08 KB) Additional Information: full citation, abstract, index terms

Here's how to network your Windows machines to your Linux server.

⁵ A model for Internet printing

Scott Isaacson

December 1998 StandardView, Volume 6 Issue 4

Full text available: pdf(519.77 KB) Additional Information: full citation

Internet protocol implementation experiences in PC-NFS

G. Arnold

August 1987 ACM SIGCOMM Computer Communication Review, Proceedings of the ACM workshop on Frontiers in computer communications technology,

Volume 17 Issue 5

Full text available: pdf(750.36 KB) Additional Information: full citation, abstract, references, index terms

A team at Sun Microsystems East Coast Division has been engaged in developing and supporting a PC implementation of Sun's Network File System (NFS™) protocols. In the course of this work we were faced with the problem of implementing Internet protocol software within the PC environment. Our experiences revealed that there are some unique obstacles to be overcome in this kind of system, and indicate that further work is needed in the development of protocols to manage networks of low-e ...

7 Andrew: a distributed personal computing environment

James H. Morris, Mahadev Satyanarayanan, Michael H. Conner, John H. Howard, David S. Rosenthal, F. Donelson Smith

March 1986 Communications of the ACM, Volume 29 Issue 3

Full text available: pdf(2.16 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

The Information Technology Center (ITC), a collaborative effort between IBM and Carnegie-Mellon University, is in the process of creating Andrew, a prototype computing and communication system for universities. This article traces the origins of Andrew, discusses its goals and strategies, and gives an overview of the current status of its implementation and usage.

Notable computer networks

John S. Quarterman, Josiah C. Hoskins

October 1986 Communications of the ACM, Volume 29 Issue 10

Full text available: pdf(4.66 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

Computer networks are becoming more numerous and more diverse. Collectively, they constitute a worldwide metanetwork.

The V distributed system David Cheriton

March 1988 Communications of the ACM, Volume 31 Issue 3

Full text available: pdf(2.55 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

The V distributed System was developed at Stanford University as part of a research project to explore issues in distributed systems. Aspects of the design suggest important directions for the design of future operating systems and communication systems.

10 Coyote: a system for constructing fine-grain configurable communication services Nina T. Bhatti, Matti A. Hiltunen, Richard D. Schlichting, Wanda Chiu November 1998 ACM Transactions on Computer Systems (TOCS), Volume 16 Issue 4

Full text available: pdf(290.21 KB)

Additional Information: full citation, abstract, references, citings, index terms

Communication-oriented abstractions such as atomic multicast, group RPC, and protocols for location-independent mobile computing can simplify the development of complex applications built on distributed systems. This article describes Coyote, a system that supports the construction of highly modular and configurable versions of such abstractions. Coyote extends the notion of protocol objects and hierarchical composition found in existing systems with support for finer-grain microprotocol ob ...

Keywords: x-kernal, configurable sevices, customization, event handlers, event-driven execution, membership, microprotocols, mobile computing, modularity, multicast, protocols, remote procedure call

11 Mobile networking in the Internet

Charles E. Perkins

December 1998 Mobile Networks and Applications, Volume 3 Issue 4

Full text available: pdf(166.90 KB)

Additional Information: full citation, abstract, references, citings, index terms

Computers capable of attaching to the Internet from many places are likely to grow in popularity until they dominate the population of the Internet. Consequently, protocol research has shifted into high gear to develop appropriate network protocols for supporting mobility. This introductory article attempts to outline some of the many promising and interesting research directions. The papers in this special issue indicate the diversity of viewpoints within the research community, and it is ...

12 Starting a university microcomputer maintenance program

Roger N. Addelson, Don M. Wee

September 1986 Proceedings of the 14th annual ACM SIGUCCS conference on User services: setting the direction

Full text available: pdf(2.73 MB)

Additional Information: full citation, citings, index terms

13 Linux WAN Routers

Tony Mancill

June 1998 Linux Journal

Full text available: html(26.69 KB) Additional Information: full citation, abstract, index terms

Musings of a Network Administrator: Another great use for Linux; Mr. Mancill tells us why his company picked Linux routers over the big names
